(NaturalNews) The following is a republishing of an important article written by Dan Roberts from AmmoLand.com. It reveals the real truth about mass shootings that bureaucrats and lawmakers are choosing to sweep under the rug: **psychiatric drugs**. If you want to know the real reason why mass shootings are taking place, this is the "inconvenient truth" the media won't cover.

Embarrassed By Your Body? Do This Once Daily (Easy But Very Effective)

As part of a collective grassroots effort to defend the Bill of Rights against usurpers and tyrants, Natural News is republishing this article without asking for permission first. When it comes to fighting tyrants and defending liberty, the unstated agreement across the entire liberty-loving grassroots community is, "Use our articles, help spread the word!" Every article I write here on Natural News, for example, may be reprinted with credit and a link back to the original source article on NaturalNews.com.

Here's the full article by Dan Roberts:

(Ammoland.com) Nearly every mass shooting incident in the last twenty years, and multiple other instances of suicide and isolated shootings all share one thing in common, and it's not the weapons used.

The overwhelming evidence points to the signal largest common factor in all of these incidents is the fact that all of the perpetrators were either actively taking **powerful psychotropic drugs** or had been at some point in the immediate past before they committed their crimes.

Multiple credible scientific studies going back more than a decade, as well as internal documents from certain pharmaceutical companies that suppressed the information show that SSRI drugs (Selective Serotonin Re-Uptake Inhibitors) have well known, but unreported side effects, including but not limited to suicide and other violent behavior. One need only Google relevant key words or phrases to see for themselves.

www.ssristory.com is one popular site that has documented over 4500 " Mainstream Media " reported cases from around the World of aberrant or violent behavior by those taking these powerful drugs.

The following list of mass shooting perpetrators and the drugs they were taking or had been taking shortly before their horrific actions was compiled and published to Facebook by John Noveske, founder and owner of Noveske Rifleworks just days before he was mysteriously killed in a single car accident. Is there a link between **Noveske's death** and his "outing" of information numerous disparate parties would prefer to suppress, for a variety of reasons?

I leave that to the individual readers to decide. But there is most certainly a documented history of people who "knew too much" or were considered a "threat" dying under extraordinarily suspicious circumstances.

From Katherine Smith, a Tennessee DMV worker who was somehow involved with several 9/11 hijackers obtaining Tennessee Drivers Licenses, and was later found burned to death in her car, to Pulitzer Prize winning journalist Gary Webb, who exposed a CIA Operation in the 80's that resulted in the flooding of LA Streets with crack cocaine and was later found dead from two gunshot wounds to the head, but was officially ruled as a "suicide", to Frank Olson, a senior research micro biologist who was working on the CIA's mind control research program MKULTRA.

After Olson expressed his desire to leave the program, he was with a CIA agent in a New York hotel room, and is alleged to have committed "suicide" by throwing himself off the tenth floor balcony. In 1994, Olson's sons were successful in their efforts to have their fathers body exhumed and re examined in a second autopsy by James Starrs, Professor of Law and Forensic science at the National Law Center at George Washington University. Starr's team concluded that the blunt force trauma to the head and injury to the chest had not occurred during the fall but most likely in the room before the fall. The evidence was called "rankly and starkly suggestive of homicide." Based on his findings, in 1996 the Manhattan District Attorney opened a homicide investigation into Olson's death, but was unable to find enough evidence to bring charges.

As I said, I leave it to the individual readers to make up their own minds if Noveske suffered a similar fate. On to the list of mass shooters and the stark link to psychotropic drugs.

- Eric Harris age 17 (first on Zoloft then Luvox) and Dylan Klebold aged 18 (Columbine school shooting in Littleton, Colorado), killed 12 students and 1 teacher, and wounded 23 others, before killing themselves. Klebold's medical records have never been made available to the public.
- Jeff Weise, age 16, had been prescribed 60 mg/day of Prozac (three times the average starting dose for adults!) when he shot his grandfather, his grandfather's girlfriend and many fellow students at Red Lake, Minnesota. He then shot himself. 10 dead, 12 wounded.
- Cory Baadsgaard, age 16, Wahluke (Washington state) High School, was on Paxil (which caused him to have hallucinations) when he took a rifle to his high school and held 23 classmates hostage. He has no memory of the event.
- Chris Fetters, age 13, killed his favorite aunt while taking Prozac.
- Christopher Pittman, age 12, murdered both his grandparents while taking Zoloft.
- Mathew Miller, age 13, hung himself in his bedroom closet after taking Zoloft for 6 days.
- Kip Kinkel, age 15, (on Prozac and Ritalin) shot his parents while they slept then went to school and opened fire killing 2 classmates and injuring 22 shortly after beginning Prozac treatment.
- Luke Woodham, age 16 (Prozac) killed his mother and then killed two students, wounding six others.
- A boy in Pocatello, ID (Zoloft) in 1998 had a Zoloft-induced seizure that caused an armed stand off at his school.
- Michael Carneal (Ritalin), age 14, opened fire on students at a high school prayer
